

special hearts

Did you know that not everyone has a healthy heart at birth? Sometimes kids can be born with a heart condition, which is called Congenital Heart Disease or CHD ("congenital" means present at birth). These conditions can range from very minor which never cause problems, to more serious conditions that need help from a doctor.

Do you know someone with a special heart?

Maybe it's your aunt, your teacher, your sibling or your friend.

Or maybe it's you!

Describe what makes their heart special in the space below.
